Charge your Tikee
(Micro USB cable not provided)

MicroSD card slot

Slot for memory card

Micro SIM slot

Slot for micro SIM card

Trigger button

Start or stop a pre-set
timelapse sequence

PowerLED and triggerLED

Indicate status, battery level and
in-progress sequence

Getting started

1. Remove the plastic film from the solar panel and charge the battery of your Tikee using a micro USB cable (not provided).

*Prior use, perform a full battery charge.
(LED blinking blue once completely charged)*

2. Create an account on our web application at my.tikee.io
Download the mobile app **Tikee Remote** from Google PlayStore or AppStore.

3. Insert a microSD card into your Tikee PRO 2.
Insert a microSIM card to use 4G.

Be careful, micro SD and micro SIM card slots are fragile and should be handled with care. Do not use tools to insert or remove cards.

4. Press 3 seconds the **Power**  button to power on.

LED starts blinking and then turns fixed. The color indicates battery level. To power off press and hold the power button for 3 seconds until the LED starts blinking.

5. Check bluetooth and location is on on your mobile phone/ tablet. Launch **Tikee Remote mobile** app close to your Tikee camera and log in with your user ID created during **step 2**.

Select your Tikee from the list.

You access directly to Tikee's status screen:

6. Choose the wireless settings :

Optional step for offline use

Click on the Wifi icon or the 4G icon, set the connection credentials and test connection. This allows data to be sent from Tikee to the web app.

7. Properly level your camera, horizontally and vertically. Frame your subject, to ensure a proper panorama stitching, avoid foreground object closer than 5m in the central area.

8. Check the framing of your TikEE camera with the preview.

Only available if Wifi or 4G connectivity is functional.

9. Create your first sequence :

Choose a type of sequence and configure it.

LONG-TERM MODE **INTERVAL 1 MIN AND +**

Up to 24 hours between each shot for an event that can last for months or more.

By default upload occurs each 25 images or at least once a day.

Suggested use : site monitoring with 1 image every 15 minutes and automatic images send via network every 25 images.

BURST MODE **INTERVAL < 1 MIN**

Burst between 100 and 200 images with an interval between 5s and 45s as a complement to a long-term sequence.

The upload of the whole burst takes place at the end of the sequence.

Suggested use : sunset with 30 sec interval during 1h30 and automatic images send via network at the end of the burst.

EVENTS MODE **INTERVAL < 1 MIN**

An interval from 5 to 45 seconds between each shot to record a few hours event.

The upload is manually done from the microSD card.

Suggested use : filling of a concert hall with 10 sec interval, images storing on the microSD card and upload.

10. Start a timelapse by clicking on **Start recording** from the mobile app or pressing the **Trigger button**  on Tikee.

*The right LED blinks every 10 seconds.
Timelapse will start at preset time. To stop ongoing recording
sequence press 3 seconds the **Trigger button** again.*

You can view the status of your Tikee at any time from the screen  in the mobile app Tikee Remote (close to your Tikee) or from  in the web app Mytikee.

10. Follow and edit your timelapse with Mytikee web app.

Image upload needs to be activated during step 7 to move on to the following step.

Previewing and sharing your timelapse

To preview your timelapse go to the web app at my.tikee.io and log in. The timelapse is available once 100 photos have been uploaded.

By default, timelapses are private.
Share them with the Community by making them public !

**By the way do not forget the #tikee on social networks
so we can watch your timelapses. ;)**

Want to know more?

You can edit your timelapses and configure your Tikee remotely. Tutorials are available on the website at enlaps.io.
